A close-run decision to hold

- The RBNZ unexpectedly left the Official Cash Rate (OCR) unchanged at 2.75% today, whereas markets and economists had expected a 25bp hike.
- The Summary Record of Meeting showed that the decision was reached by a 4–3 vote, with internal and external committee members in each camp.
- The Record of Meeting also showed that the choice was presented as being between hiking today, or hiking in December. We continue to expect three further hikes, but with the timing now being December, February and March, taking the OCR to 3.50% as before.

In brief

Both economists' predictions and market pricing agreed a 25bp hike to 3.00% was by far the likeliest outcome going into today's meeting. But in a surprise move, the RBNZ Monetary Policy Committee voted 4–3 to leave the Official Cash Rate (OCR) at 2.75%, while agreeing that tighter monetary policy is likely to be required. The Committee emphasised the "increasingly fragile" global economy, which could deteriorate abruptly. For the Committee as a whole, this outweighed concerns about the potential for persistent core inflation.

The RBNZ didn't publish an OCR track, since it wasn't a full Monetary Policy Statement. However, the Summary Record of Meeting revealed that the Committee was effectively voting on a hike today, or a hike in December. That makes a hike in December the clear base case, but it's conditional:

"Members discussed that information arriving over the next six weeks could meaningfully change the appropriate policy stance in either direction."

The Policy Assessment and the Summary Record of Meeting still contained a clear hiking bias. The Committee acknowledged:

- the lift in core inflation measures (though described as "broadly in line with expectations", highlighting that it is difficult to assess the "surprise" factor for variables the RBNZ doesn't forecast),
- higher oil prices,
- the weaker currency, put down to "a confluence of factors", and
- a resulting higher near-term inflation forecast (4.4% y/y in Q4, similar to our 4.5% forecast).

The three members favouring a hike emphasised the risk that persistent cost pressures become entrenched in price-setting.

However, the Committee also discussed downside risks to both domestic and global growth. Indeed, it appears the latter was a significant consideration for those members who voted to leave the OCR unchanged, with a comment that a global downturn could be "abrupt", against a backdrop of high debt, financial vulnerabilities and uncertain returns on AI investment, potentially even warranting policy easing. We concur that risks are manifold. However, it is extremely difficult to predict the timing and magnitude of 'abrupt' developments. We therefore assumed that that would remain in the risk basket, rather than driving today's decision. After all, there are risks the oil price could abruptly spike over the next six weeks as well. For our part, we'll continue to leave a global lurch in the risk basket, and focus on the knowns, which amount to more inflationary starting point. Conditional on no abrupt deterioration in the global outlook – we still expect three more 25bp hikes, at the next three meetings: December, February and March.

Key quotes:

- **The OCR decision:** “The Monetary Policy Committee today voted 4–3 to hold the OCR at 2.75 percent.”
- **The OCR outlook:** “The Committee agreed that tighter monetary policy is likely to be required but remains conditional on the economic outlook.”
- **Domestic activity:** “The New Zealand economy continues to recover, although conditions remain uneven.”
- **Global growth risks:** “Geopolitical events, high energy prices, high and rising public and private debt levels pose downside risk to global growth.”... “The Committee noted that a global downturn could occur abruptly.”
- **The inflation outlook:** “Annual inflation is expected to increase to 4.4 percent in the December quarter, largely on the basis of current prices for oil futures.”... “Direct effects of higher fuel prices will drop out of the annual inflation calculation in late 2027 if prices for refined petroleum products stabilise or fall.”
- **Core inflation:** “Core inflation measures have risen to around the top of the Committee’s 1 to 3 percent target band, broadly in line with expectations.”
- **Inflation risks:** “The Committee is vigilant to risks associated with changes in inflation expectations, and wage- and price-setting behaviour. To date, wage growth has been subdued, and medium-term inflation expectations have remained stable.”

Our take

Our view is that a 25bp hike today would have been the most prudent course, given the higher outlook for near-term inflation, resilience in activity indicators, the turn higher in Q3 core inflation measures – and the fact that a hold would weaken the already soggy exchange rate meaningfully, as has indeed occurred (see the Markets section below). In the end, it was a close-run thing. However, some Committee members felt it was more prudent to watch how developments unfold over the next six weeks before taking action – with an eye on downside risks to global growth, in particular. We continue to believe that it will be necessary to lift the OCR to 3.5% in order to head off risks of inflation becoming persistent, and our base case is that the three hikes will come at the next three meetings, in December, February and March. Just like the RBNZ’s, our forecasts remain highly conditional on developments. As our recent [Insight note](#) highlighted, oil shocks are tricky, inflationary in the near term but bad for growth over the longer term, with no certainty about how the two will balance out.

What to watch

Key data between now and the next OCR decision includes labour market data on 4 November and inflation expectations on 17 November, as well as the Q3 GDP partials (building work put in place, survey of manufacturing) that are out just before the next Monetary Policy Statement on 9 December. The monthly activity and inflation indicators including our Business Outlook survey and Consumer Confidence will also be important for gauging the resilience of the economy in the face of a significant cost shock.

Markets

Short-end interest rates and the NZD snapped lower immediately after the decision was announced, with the 2-year swap rate falling around 13bp to 3.98%, and the Kiwi falling around 75bp to 0.5605. While those moves are significant, as one might expect given the magnitude of today’s surprise (noting that markets went into the decision with +23.5bp priced in), by characterising the decision as just a matter of timing, the RBNZ has successfully shored up expectations of a December hike. Indeed, by 2.45pm, market expectations for a December hike had settled at around 80%, with +20bp priced in.

Given our revised OCR forecasts following today's pause (which we didn't expect) and the earlier reduction in the weekly pace of NZGB issuance (which we did expect), we have tweaked our interest rate forecasts, as below.

Table 1. Our new interest rate forecasts

	Today	Dec-26	Mar-27	Jun-27	Sep-27	Dec-27	Mar-28	Jun-28
NZ OCR	2.75	3.00	3.50	3.50	3.50	3.50	3.50	3.50
NZ 90 day bill	3.37	3.45	3.75	3.80	3.80	3.80	3.80	3.80
NZ 2-yr swap	3.98	3.94	3.90	3.85	3.85	3.85	3.85	3.85
NZ 10-yr bond	4.91	4.95	4.95	4.85	4.85	4.60	4.60	4.50

Media release – OCR held at 2.75%

The Monetary Policy Committee today voted 4 - 3 to hold the OCR at 2.75 percent.

Annual consumers price index inflation was 3.7 percent in the September quarter, down from 4.1 percent in June and lower than expected. To date, wage growth has been subdued, and medium-term inflation expectations have remained stable. However, core inflation measures have increased to around the top of the Committee's 1 to 3 percent target band, and price increases have become more broad-based across the economy.

Global events are adding to near-term inflation pressures in New Zealand. Fuel prices have risen further because of ongoing disruptions in global energy markets, and the exchange rate has fallen by around 3 percent since early September. Annual inflation is expected to increase to 4.4 percent in the December quarter, largely reflecting current futures prices for fuel. Near-term inflation forecasts are uncertain given volatility in prices for oil and refined fuels.

The New Zealand economy continues to recover, although conditions remain uneven. Export-exposed parts of the economy are benefiting from high commodity prices, strong demand for goods exports and increased tourist numbers. But domestic demand remains subdued outside of exporting centres. There are some early signs of a recovery in residential investment, including in Auckland.

The Committee is focused on returning inflation to the 2 percent target mid-point over the medium term, discounting temporary disturbances to inflation and avoiding unnecessary economic instability. Subdued growth in household spending is limiting the ability of some firms to pass on higher costs to restore profit margins. But the longer inflation remains high, the greater the risk of higher costs feeding into inflation expectations and price- and wage-setting behaviour, making inflation more persistent.

Global growth has been resilient but is increasingly fragile given geopolitical tensions, high energy prices, financial stresses, and surging AI-related investment. New Zealand's recovery could be stronger than expected but could also lose momentum if the global environment deteriorates or export strength does not flow through to jobs, incomes and household spending.

All Committee members agreed on the overall outlook for inflation. However, members differed in how much weight they placed on various risks and the timing of the monetary policy response. The Committee agreed that tighter monetary policy is likely to be required but remains conditional on the economic outlook.

Summary record of meeting – October 2026 MPR

The Monetary Policy Committee is setting monetary policy to return inflation to the 2 percent target mid-point over the medium term, discounting temporary disturbances in inflation and avoiding unnecessary instability in the economy.

Inflation is above the 1 to 3 percent target range

Annual consumers price index (CPI) inflation is above the Committee's 1 to 3 percent target range. Headline inflation was 3.7 percent in the September 2026 quarter, slightly lower than expected and down from 4.1 percent in the June quarter.

Higher fuel and related prices have directly increased inflation and flowed through to domestic prices via higher input costs. Annual tradables inflation fell from 4.9 percent to 4.3 percent in the September quarter but was slightly higher than expected. Excluding vehicle fuels, annual inflation increased to 3 percent in the September quarter. The pass-through of the initial surge in global prices to domestic price categories has so far been less than previously assumed. Impacts on short-term pricing behaviour appear to have been contained and medium-term inflation expectations remain well anchored.

Measures of non-tradables inflation are mixed. Non-tradables inflation was 3.3 percent in the September quarter, but this was weaker than expected and partly reflects elevated government charges.

Core inflation measures have risen to around the top of the Committee's 1 to 3 percent target band, broadly in line with expectations. Price increases have become more broad-based since the June quarter. For example, on a weighted basis, 56 percent of items in the CPI basket rose by more than 3 percent in the year to September 2026. The Committee noted the importance of ensuring accurate and timely CPI weights, taking into account how changes in behaviour affect the CPI.

Inflation will remain elevated in the near term, driven by volatile tradable prices

Annual inflation is expected to increase to 4.4 percent in the December quarter, largely on the basis of current prices for oil futures. Direct effects of higher fuel prices will drop out of the annual inflation calculation in late 2027 if prices for refined petroleum products stabilise or fall. Members noted the high uncertainty around near-term inflation forecasts given high volatility in prices for oil and refined fuels.

Disruptions to global oil supply, loss of refining capacity, and shipping disruption due to ongoing conflicts are putting further upward pressure on international refined fuel prices.

The New Zealand dollar trade-weighted index has declined approximately 3 percent since the September MPS. Although global interest rates have increased, the decline likely reflects a confluence of factors in a highly uncertain environment.

Sustained higher refined fuel prices and exchange rate depreciation could risk larger indirect effects on inflation. It could also increase the potential for second round price effects through wage- and price-setting behaviour. Pass-through, however, is state-dependent and continuing weak demand could limit these effects.

Global growth has been resilient, but is increasingly fragile

The Committee noted that although geopolitical uncertainty remains elevated, GDP growth among New Zealand's trading partners has been resilient. However, global economic conditions are becoming increasingly fragile and uneven across countries, reflecting differences in domestic demand, fuel subsidies, fiscal policy, connection to the AI investment boom, and exposure to elevated energy prices.

Global long-term interest rates have increased, partly reflecting high fiscal deficits in some countries and AI investment spending adding to private sector demand for capital. Inflation is also increasing in many economies. Some central banks have increased policy rates in response and market expectations for higher global policy rates have risen.

New Zealand's economic recovery continues, but conditions remain varied

The Committee noted that GDP growth was more than expected through the first half of 2026. Business survey measures point to continued expansion in economic activity.

Incomes for households and businesses exposed to the export sector are being supported by elevated commodity prices, strong export volumes, and high international visitor arrivals. The export-led recovery is supporting activity,

investment and employment in regions and industries exposed to primary exports, manufacturing and tourism. Some estimates suggest that international trade supports a quarter of New Zealand's employment.

However, households and businesses exposed to domestic demand continue to face challenging conditions. Household consumption has been weak and the aggregate saving rate is estimated to be 3.7 percent, above the 10-year average of 1 percent. Employment growth remains subdued and higher prices will further reduce real incomes and purchasing power. House prices continue to decline, weighing on household sentiment and spending. However, residential investment has seen some early signs of recovery, including in Auckland.

The Committee noted that these mixed conditions and cost pressures are also apparent from RBNZ business outreach. Firms report elevated costs, but the ability to pass these on to prices varies across industries. Compared to June, fewer firms experienced and expected price increases in the September Quarterly Survey of Business Opinion, but the levels remain elevated.

Business investment intentions are resilient but focused on improving productivity and reducing costs, rather than on business expansion. Employment intentions remain weak, pointing to continued slow recovery in the labour market.

Domestic financial conditions are mixed

Domestic wholesale interest rates have risen, reflecting both increased market expectations of a higher OCR and higher long-term global interest rates.

However, some aspects of domestic financial conditions have eased with a lower exchange rate and declines in some term lending rates for households and businesses. Subdued credit demand and higher deposits have resulted in less pass-through of wholesale rate increases to both deposit and lending rates.

Risks to the global outlook are becoming pervasive

The Committee assessed that there are significant risks to the global economic outlook. Geopolitical events, high energy prices, high and rising public and private debt levels pose downside risk to global growth. There is uncertainty about whether the surge in AI investment will be justified by economic fundamentals.

Since the September MPS, financial stability risks have increased due to high levels of indebtedness and opaque and complex financing arrangements for some AI investments. Fuel subsidies are dampening the inflation impacts of higher fuel prices in some economies but are also contributing to weaker fiscal positions. Rising long-term interest rates could expose financial vulnerabilities, prompting asset-price adjustments and financial stress. The Committee noted that a global downturn could occur abruptly.

The Committee discussed the considerable uncertainty about the global inflation outlook. Energy prices remain vulnerable to developments in geopolitical conflicts, refining capacity, inventories, supply-chain adjustments and global demand. Freight and shipping costs could also increase further, adding to global inflation pressures.

Global risks could have significant implications for New Zealand, including through export demand, the terms of trade, the exchange rate and financial conditions. Higher global food prices, because of elevated fuel and fertiliser costs or adverse weather events, could also affect primary industries and increase export prices.

Risks to New Zealand's economic recovery

Members discussed risks to New Zealand's economic recovery. Members noted that the economy had shown resilience and could have more underlying momentum. Members also discussed the risk that strength in export-oriented sectors does not flow through more broadly to domestic economic activity. Persistently weak domestic demand or a softening in global demand for New Zealand's exports could cause the recovery to lose momentum. Sudden geopolitical developments and financial stress could undermine consumer and investor confidence.

Structural changes are affecting the New Zealand economy as it adjusts to shifts in urban land use, AI adoption and the transition in energy use away from oil and gas. These changes could temporarily reduce productive capacity and slow the recovery as resources, including labour, move between sectors. At the same time, greater investment in technology could help firms manage costs and lift productivity. Changes in the housing market could further impact wealth effects on consumption and therefore the transmission of monetary policy.

Monetary policy is focused on the medium-term inflation target

When setting policy, the Committee is focused on the medium-term inflation outlook.

The Committee reflected on the impacts of the two recent increases in the OCR. Members noted that the indirect effects of the initial increase in fuel prices and second round price effects have been smaller than expected so far. Pass-through could occur later and be larger, particularly if higher global energy, shipping and food costs are sustained. There is uncertainty about the impact of recent cost increases on firms' margins and implications for inflation persistence.

The Committee is vigilant to risks associated with changes in inflation expectations, and wage- and price-setting behaviour. To date, wage growth has been subdued, and medium-term inflation expectations have remained stable. Administered price inflation is also likely to remain elevated but was lower than expected in the September quarter.

Further OCR increases likely, but are conditional on the outlook

The Committee discussed the monetary conditions required to return inflation sustainably to the 2 percent target mid-point. The removal of monetary stimulus to date has supported forward-looking indicators of medium-term inflation remaining anchored.

The Committee acknowledged that the neutral interest rate has a wide range of plausible estimates. Members noted that the increase in global long-term yields may partly signal a higher global neutral interest rate, due to higher inflation expectations, war destruction and demand for capital to support AI investment. Higher global interest rates could bring forward a potential global downturn, and the neutral interest rate could decline rapidly in the event of an abrupt global adjustment.

Prasanna Gai and Anna Berman attached material risk to the possibility that the global environment could shift abruptly. It was therefore appropriate to account for such risks when judging neutral rates and the stance of monetary policy rather than relying on most likely or mid-point measures.

Members reflected on potential trade-offs associated with increasing the OCR at this meeting or waiting until the December MPS.

Members discussed that information arriving over the next six weeks could meaningfully change the appropriate policy stance in either direction. There is a risk that inflation becomes entrenched before conventional expectations measures respond, despite the previous two OCR increases. In addition, the world economy could tip abruptly into a downturn causing weaker inflation over the medium term. It is also possible that geopolitical escalation could drive fuel prices higher while weakening global economic activity at the same time.

All members judged that monetary policy must be robust to these risks. If domestic pricing pressures fail to moderate sufficiently or broaden beyond what costs and normal pass-through can explain, this could warrant further tightening. On the other hand, subdued pricing pressures could require holding at future meetings. And if the global economy turns sharply down, materially weakening demand and the inflation outlook, this could alter the desired stance, including leading to monetary easing.

All members agreed on the overall outlook for inflation. However, members differed in how much weight they placed on various risks and the timing of the monetary policy response.

Anna Breman, Carl Hansen, Rebecca Williams and Prasanna Gai favoured holding the OCR at this meeting as two recent OCR increases allow the Committee to take further time to assess their effects and economic developments. Actual inflation was lower than expected, reflecting smaller indirect effects of higher fuels prices, and medium-term inflation expectations and wage growth remain consistent with returning inflation to the target mid-point. These members judged that although a broader range of items exhibited significant price increases, this was largely expected. A salient issue is whether businesses are taking the opportunity to increase their margins, which does not appear to be the case so far. These members emphasised the risk of a weak recovery, particularly in household consumption and investment. They favoured pausing at this meeting to observe and assess demand and financial conditions.

Hayley Gourley, Paul Conway and Karen Silk favoured increasing the OCR by 25 basis points at this meeting. These members emphasised that core inflation has been above levels consistent with headline inflation at the target mid-point for some time. This increases the risk of inflation becoming entrenched in price-setting behaviour as the conflict and its consequences endure, including through higher freight and shipping costs. These members put more weight on the fact that aggregate growth has been resilient despite challenges for many businesses and households. Acting now would guard against sustained inflation pressures and potentially reduce the risk of needing to do more with interest rates later. Overall, this warrants an increase in the OCR to around the mid-point of the neutral range.

The Committee decided by vote to hold the OCR at 2.75 percent

The Committee is focused on sustainably returning inflation to the 2 percent target mid-point over the medium term, while avoiding unnecessary instability in output, employment, interest rates and the exchange rate.

On Wednesday 28 October, four members [Anna Breman, Carl Hansen, Prasanna Gai, Rebecca Williams] voted to hold the OCR at 2.75 percent and three members [Paul Conway, Hayley Gourley, Karen Silk] voted for a 25-basis-point increase to 3 percent at this meeting. All members agreed that tighter monetary policy is likely to be required, but remains conditional on the economic outlook.

Attendees:

MPC members: Anna Breman (chairperson), Carl Hansen, Hayley Gourley, Karen Silk, Paul Conway, Prasanna Gai, Rebecca Williams

Treasury Observer: Struan Little

MPC Secretary: Liz Kendall

Nothing contained in this document is intended to constitute Omani investment, legal, tax, accounting or other professional advice.

People's Republic of China (PRC). This document may be distributed by either ANZ or Australia and New Zealand Bank (China) Company Limited (**ANZ China**). Recipients must comply with all applicable laws and regulations of PRC, including any prohibitions on speculative transactions and CNY/CNH arbitrage trading. If this document is distributed by ANZ or an Affiliate (other than ANZ China), the following statement and the text below is applicable: No action has been taken by ANZ or any affiliate which would permit a public offering of any products or services of such an entity or distribution or re-distribution of this document in the PRC. So, the products and services of such entities are not being offered or sold within the PRC by means of this document or any other document. This document may not be distributed, re-distributed or published in the PRC, except under circumstances that will result in compliance with any applicable laws and regulations. If and when the material accompanying this document relates to the products and/or services of ANZ China, the following statement and the text below is applicable: This document is distributed by ANZ China in the Mainland of the PRC.

Peru. The information contained in this document has not been, and will not be, registered with or approved by the Peruvian Superintendency of the Securities Market (Superintendencia del Mercado de Valores, **SMV**) or the Lima Stock Exchange (Bolsa de Valores de Lima, **BVL**) or under the Peruvian Securities Market Law (Legislative Decree 6 861), and will not be subject to Peruvian laws applicable to public offerings in Peru. To the extent this information refers to any securities or interests, it should be noted the securities or interests may not be offered or sold in Peru, except if (i) such securities or interests were previously registered with the Peruvian Superintendency of the Securities Market, or (ii) such offering is considered a private offering in Peru under the securities laws and regulation of Peru.

Qatar. This document has not been, and will not be:

- lodged or registered with, or reviewed or approved by, the Qatar Central Bank (QCB), the Qatar Financial Centre (QFC) Authority, QFC Regulatory Authority or any other authority in the State of Qatar (Qatar); or
- authorised or licensed for distribution in Qatar, and the information contained in this document does not, and is not intended to, constitute a public offer or other invitation in respect of securities in Qatar or the QFC.

The financial products or services described in this document have not been, and will not be:

- registered with the QCB, QFC Authority, QFC Regulatory Authority or any other governmental authority in Qatar; or
- authorised or licensed for offering, marketing, issue or sale, directly or indirectly, in Qatar.

Accordingly, the financial products or services described in this document are not being, and will not be, offered, issued or sold in Qatar, and this document is not being, and will not be, distributed in Qatar. The offering, marketing, issue and sale of the financial products or services described in this document and distribution of this document is being made in, and is subject to the laws, regulations and rules of, jurisdictions outside of Qatar and the QFC. Recipients of this document must abide by this restriction and not distribute this document in breach of this restriction. This document is being sent/issued to a limited number of institutional and/or sophisticated investors (i) upon their request and confirmation that they understand the statements above; and (ii) on the condition that it will not be provided to any person other than the original recipient, and is not for general circulation and may not be reproduced or used for any other purpose.

Singapore. To the extent that this document contains any statements of opinion and/or recommendations related to an investment product or class of investment product (as defined in the Financial Advisers Act 2001), this document is distributed in Singapore by ANZ solely for the information of "accredited investors", "expert investors" or (as the case may be) "institutional investors" (each term as defined in the Securities

and Futures Act 2001 of Singapore). ANZ is licensed in Singapore under the Banking Act 1970 of Singapore and is exempted from holding a financial adviser's licence under Section 23(1)(a) of the Financial Advisers Act 2001 of Singapore. In respect of any matters arising from, or in connection with, the distribution of this document in Singapore, please speak to your usual ANZ contact in Singapore.

United Arab Emirates (UAE). This document is distributed in the UAE or the Dubai International Financial Centre (DIFC) (as applicable) by ANZ. This document does not, and is not intended to constitute: (a) an offer of securities anywhere in the UAE; (b) the carrying on or engagement in banking, financial and/or investment consultation business in the UAE under the rules and regulations made by the Central Bank of the UAE, the Emirates Securities and Commodities Authority or the UAE Ministry of Economy; (c) an offer of securities within the meaning of the Dubai International Financial Centre Markets Law (**DIFCML**) No. 12 of 2004; and (d) a financial promotion, as defined under the DIFCML No. 1 of 200. ANZ DIFC Branch is regulated by the Dubai Financial Services Authority (**DFSA**). The financial products or services described in this document are only available to persons who qualify as "Professional Clients" or "Market Counterparty" in accordance with the provisions of the DFSA rules.

United Kingdom. This document is distributed in the United Kingdom by Australia and New Zealand Banking Group Limited (ANZ) solely for the information of persons who would come within the Financial Conduct Authority (FCA) definition of "eligible counterparty" or "professional client". It is not intended for and must not be distributed to any person who would come within the FCA definition of "retail client". Nothing here excludes or restricts any duty or liability to a customer which ANZ may have under the UK Financial Services and Markets Act 2000 or under the regulatory system as defined in the Rules of the Prudential Regulation Authority (PRA) and the FCA. ANZ considers this document to constitute an Acceptable Minor Non-Monetary Benefits (AMNMB) under the relevant inducement rules of the FCA. ANZ is authorised in the United Kingdom by the PRA and is subject to regulation by the FCA and limited regulation by the PRA. Details about the extent of our regulation by the PRA are available from us on request.

United States. Except where this is a FX-related document, this document is distributed in the United States by ANZ Securities, Inc. (ANZ SI) which is a member of the Financial Regulatory Authority (FINRA) (www.finra.org) and registered with the SEC. ANZSI's address is 277 Park Avenue, 31st Floor, New York, NY 10172, USA (Tel: +1 212 801 9160 Fax: +1 212 801 9163). ANZSI accepts responsibility for its content. Information on any securities referred to in this document may be obtained from ANZSI upon request. This document or material is intended for institutional use only – not retail. If you are an institutional customer wishing to effect transactions in any securities referred to in this document you must contact ANZSI, not its affiliates. ANZSI is authorised as a broker-dealer only for institutional customers, not for US Persons (as "US person" is defined in Regulation S under the US Securities Act of 1933, as amended) who are individuals. If you have registered to use our website or have otherwise received this document and are a US Person who is an individual: to avoid loss, you should cease to use our website by unsubscribing or should notify the sender and you should not act on the contents of this document in any way. Non-U.S. analysts may not be associated persons of ANZSI and therefore may not be subject to FINRA Rule 2242 restrictions on communications with the subject company, public appearances and trading securities held by the analysts. Where this is a FX-related document, it is distributed in the United States by ANZ's New York Branch, which is also located at 277 Park Avenue, 31st Floor, New York, NY 10172, USA (Tel: +1 212 801 9160 Fax: +1 212 801 9163).

Vietnam. This document is distributed in Vietnam by ANZ or ANZ Bank (Vietnam) Limited, a subsidiary of ANZ.
